Office Action Summary	Application No. 10/516,735	Applicant(s) PALM ET AL.	
	Examiner Timothy F. Simone	Art Unit 1761	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Election/Restrictions

Newly submitted claims 16-18 are directed to an invention that is independent or distinct from the invention originally claimed for the following reasons:

The inventions as claimed are independent since they are not connected in design, operation or effect, i.e., each invention is separately usable and the operation, design and effect of one is independent of the other.

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claims 16-18 stand withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-6, and 9-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zimmer (US 6,168,141). The patent to Zimmer discloses an apparatus in an infuser for a liquid food product, the apparatus comprising a pressure vessel (10) with an inlet (24a,24b) for the product located in its upper region and an outlet (20) for the product located in its lower region, the infuser also including an inlet for steam disposed

such that steam enters into the upper region of the pressure vessel through a concentric distribution chamber (upper region of elements 16,30) wherein the concentric distribution chamber is defined by a wall of the pressure vessel (16), a guide plate (30) and at least one foraminated plate (19), and the pressure vessel is designed so that the product is inherently treated by the steam below the guide plate. Thus, the Zimmer reference discloses the claimed subject matter except for having two steam inlets, the precise speed of the steam, the exact diameter of the holes in the plates, and the precise extent below the foraminated plates. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have provided the optimum speed and dimensions set forth in the claims, since it has been held that discovering an optimum value with respect to speed and dimensions involves only routine skill in the art. Further, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have provided two steam inlets as opposed to one, since it has been held that mere duplication of the essential working parts of a device involves only routine skill in the art.

Response to Arguments

Applicant's arguments with respect to the claims have been considered but are moot in view of the new grounds of rejection.
